## Introduction
### Purpose

This document lists and describes all of the validations applied to the monthly insurer interface data submission.  It also describes the interaction between the Insurer and the Office of Industrial Relations for processing the data submission.

The information provided herein is to assist insurers, system providers and developers with referencing and understanding the Control, Record and Field validations applied to the submitted insurer data when processed by the Office of Industrial Relations.

When the Office of Industrial Relations processes the data files supplied by insurers, three levels of validation (control, record and field validation) and data warning errors are performed on the data at a control file, record and field level.

If the data fails the control or record validation stage, a failed validation report is sent to the insurer.  Once the data is loaded successfully, a validation report is sent to the insurer that contains details of any field validation and data warning errors.

This document outlines the data submission validation process and identifies each of the Control, Record and Field validation rules applied to the Insurer data.

This document should be read in conjuction with the Workers' Compensation Insurers' Interface Data Specification.

### Audience

The information provided is made available to insurers and system providers of Queensland workers' compensation.

### Date Effective

The following validation rules and descriptions are current as at 01/12/2020.

### Disclaimer

The information provided is distributed by the Office of Industrial Relations as an information source only. The Office of Industrial Relations does not take responsibility for any reliance upon the information requested. The information is provided solely on the basis that readers will be responsible for making their own assessment of the matters discussed herein and are advised to verify all relevant representations, statements and information.
