Manufacturing industry

1. Summary of findings

a. Labour market

- Employment in the Manufacturing industry decreased over the period 2015–16 to 2019–20, while Queensland in general experienced employment growth. Over the period, employment reduced 0.6 per cent per annum in Manufacturing, whilst a growth rate of 1.6 per cent per annum was recorded for the whole Queensland economy.
- Primary metal and metal product manufacturing recorded strong growth in employment over the five-year period to 2019–20 (up 5,141 people or 39 per cent) whilst food product manufacturing recorded a reduction (down 9,149 people or 20 per cent).
- Workers in the Manufacturing industry are employed on a predominantly full-time basis. In 2019–20, the rate of full-time employment was higher for the Manufacturing industry (87 per cent) than for Queensland (69 per cent).

b. Accepted workers' compensation claims

i. Occupations

- In 2018–19, most workers' compensation claims in the manufacturing sector were for:
 - labourers (4,670 claims or 41 per cent of all industry claims)
 - technicians and trades workers (3,360 claims or 30 per cent).

ii. Non-fatal claims and claim rates

- In 2019–20, the non-fatal claim rate for manufacturing, at 62.4 claims per 1,000 workers, was well above the average for Queensland at 27.4 claims per 1,000 workers.
- Food product manufacturing recorded the highest number of non-fatal claims (2,544 claims), with a claim rate at 67.5 claims per 1,000 employees.

- Between 2015–16 and 2019–20, the non-fatal claim rate fell 1.6 per cent per annum for the sector and 2.6 per cent per annum for the whole of Queensland.

iii. Serious injuries

- The serious injury claim rate for manufacturing, at 22.8 claims per 1,000 employees, was substantially above the state average of 12.3 in 2019–20.
- From 2015–16 to 2019–20, the serious injury claim rate increased by 3.2 per cent per annum for the sector, more than the increase of 1.2 per cent per annum recorded for all Queensland industries.

iv. Mechanisms of injury

- The most common mechanisms of injury over the five years to 2019–20 were:
 - body stressing (34 per cent)
 - being hit by moving objects (26 per cent)
 - hitting objects with a part of the body (19 per cent).

v. Agencies of injury

- The most common agencies of injury over the five years to 2019–20 were:
 - materials and substances (29 per cent),
 - non-powered hand tools, appliances and equipment (27 per cent)
 - machinery and (mainly) fixed plant (12 per cent)
 - environmental agencies (9 per cent).

vi. Fatalities

- Over the period 2015–16 to 2019–20 manufacturing was one of the most hazardous industries in Queensland. There was an average of eight fatalities each year recorded for the sector, the same number recorded for the transport, postal and warehousing industry.

c. Inspectorate activity

- In 2019–20:
 - Activities such as workplace visits, intervention activities, workshops, presentations and seminars by inspectors to businesses in the Manufacturing industry accounted for approximately 11 per cent of all inspector activities in Queensland. This is almost the same as the industry's share of notified events (10 per cent).
 - Approximately 62 per cent of events notified for the Manufacturing industry were categorised as bodily harm or dangerous event. Proactive activities made up 18 per cent of all activities for inspectors.
 - The share of statutory notices issued to businesses in the Manufacturing industry was 13 per cent. This is more than the industry's share of employees in Queensland (seven per cent).
 - Over 88 per cent of notices issued to businesses in the Manufacturing industry were improvement notices.

2. Labour market

a. Business size

Table 1 below shows the structure of businesses in manufacturing was similar to that of Queensland as a whole in 2019. The vast majority of businesses in manufacturing were small businesses (93 per cent) compared with the Queensland total of 97 per cent. A small proportion of businesses in manufacturing were medium sized (around seven per cent) and large sized (less than one per cent).

Table 1: Manufacturing, size of business, Queensland, June 2019

b. Workers employed

Between 2015–16 and 2019–20, the Australian Bureau of Statistics (ABS) estimated that the number of workers in the industry decreased by around three per cent, while overall employment in Queensland increase by approximately six per cent over the period.

Table 2 shows in 2019–20, employment was highest in:

- food product manufacturing (37,697 people or 23 per cent of all industry workers)
- primary metal and metal product manufacturing (18,465 people or 11 per cent)
- machinery and equipment manufacturing (18,182 people or 11 per cent).

Of all workers in the industry, 87 per cent were employed in a full-time capacity and 77 per cent were males in 2019–20¹.

c. Full-time and part-time employment

In 2019–20, manufacturing workers were engaged mostly on a full-time basis (87 per cent). Full-time employment was most prevalent in petroleum and coal product manufacturing (100 per cent).

Over the period 2015–16 to 2019–20, full-time employment in the industry decreased by around 0.7 per cent per annum on average, whereas part-time employment increased by 0.8 per cent per annum. In comparison, full-time employment for Queensland grew by 1.3 per cent per annum and part-time employment grew by 2.2 per cent per annum.

3. Accepted workers' compensation claims

a. Accepted claims by occupation

As Table 4 below shows, in 2018-19, Labourers had the highest number of accepted claims (4,670 claims) followed by technicians and trades workers (3,360 claims).

Note that 2019–20 claims data has been omitted due to a lag in coding occupation data.

Table 4: Manufacturing, accepted non-fatal claims, by occupation

Occupation	Number of claims				
	2015–16	2016-17	2017-18	2018-19	Av. annual change (% p.a.)
Labourers	5,625	5,262	5,167	4,670	-6.0

b. Accepted non-fatal claims and claim rates by industry

The number of total accepted non-fatal claims (injury plus disease claims) has reduced 2.2 per cent per annum for the industry and 1.1 per cent per annum for Queensland over the five years to 2019–20 (Table 5).

Over the same period, the claim rate for manufacturing related non-fatal claims has fallen by 1.6 per cent per annum (down from 67.0 to 62.4 claims per 1,000 workers) and 2.6 per cent per annum for Queensland (down from 30.6 to 27.4 claims per 1,000 workers).

There has been around a two per cent per annum reduction in the claim rate over the period 2015–16 to 2019–20, whilst employment in the industry has decreased by less than one percent on average per annum over the same period.

Table 5: Manufacturing, total accepted non-fatal claims and claim rate

Subdivision	Number of claims					
	2015–16	2016-17	2017-18	2018-19	2019–20	Av. annual change (% p.a.)

Sources: QSA, July 2020. ABS, Labour Force, Australia (released July 2020).

In 2019–20 there were 10,279 accepted non-fatal injury and disease claims, of those 7,443 related to injuries while 2,836 related to disease and other causes.

Over the period 2015–16 to 2019–20, the industry experienced an average annual reduction of 3.1 per cent per annum in the number of non-fatal injury claims compared to a fall of 1.9 per cent per annum recorded for Queensland. Over the same period, the number of non-fatal disease and other claims for the industry increased 0.7 per cent per annum, which was lower than the increase for Queensland of 0.9 per cent per annum.

The incidence (claims per 1,000 workers) of non-fatal injuries in 2019–20 was significantly higher for manufacturing workers (45.2) than workers in all industries in Queensland (19.3). Additionally, the industry rate for non-fatal diseases and other categories of 17.2 claims per 1,000 workers sat higher compared to 8.1 for Queensland.

c. Serious injury claims by industry and occupation

In 2019–20, the serious injury claim rate (injuries requiring one or more weeks off work) for manufacturing, at 22.8 claims per 1,000 workers, was well above the state average of 12.3 claims per 1,000 workers for all industries.

Over the five-year period to 2019–20, the serious injury claim rate increased by 3.2 per cent per annum for the Manufacturing industry, compared to an increase of 1.2 per cent per annum recorded for Queensland.

The food product manufacturing industry subdivision recorded the highest number of serious injury claims in 2019–20, with 1,036 claims or 28 per cent of all serious claims made by manufacturing workers. However, the fabricated metal product manufacturing industry subdivision recorded the highest serious claim rate in 2019–20, at 48.7 per 1,000 workers.

Table 8: Manufacturing, accepted non-fatal serious claims and claim rate

Industry subdivision	Number of claims					
	2015–16	2016-17	2017-18	2018-19	2019–20	Av. annual change (% p.a.)

Labourers and technicians and trades workers had a large number of serious claims in 2018-19, 1,780 and 1,145 claims, respectively.

Overall, claims for serious injuries in 2018-19 for the Manufacturing industry accounted for 32 per cent of the industry's total number of accepted nonfatal claims. In comparison, the number of serious claims accepted for all of Queensland accounted for 40 per cent of accepted claims.

Note that 2019–20 claims data has been omitted due to a lag in coding occupation data.

Table 9: Manufacturing, accepted non-fatal serious claims by occupation

Occupation	Number of claims				
	2015–16	2016-17	2017-18	2018-19	Av. annual change (% p.a.)

d. Mechanism of injury (non-fatal claims)

Table 10 below shows the most common mechanisms of injury in manufacturing, across all industry subdivisions for the period 2015–16 to 2019–20, were:

- body stressing (34 per cent)
- being hit by moving objects (26 per cent)
- hitting objects with a part of the body (19 per cent).

These three mechanisms accounted for the majority (78 per cent) of industry claims.

Table 10: Manufacturing, most prevalent mechanisms of injury for accepted non-fatal workers compensation claims by subdivision, 2015–16 to 2019–20

Industry subdivision	Mechanism of injury	Percentage of claims within subdivision (%)
Food product manufacturing (12,874 claims)	Body stressing	38.9
	Being hit by moving objects	19.7
	Hitting objects with a part of the body	14.9
Beverage and tobacco product manufacturing (663 claims)	Body stressing	39.7
	Being hit by moving objects	16.2
	Hitting objects with a part of the body	15.3
Textile, leather, clothing and footwear manufacturing (627 claims)	Body stressing	36.3
	Hitting objects with a part of the body	18.6
	Being hit by moving objects	14.8
Wood product manufacturing (4,323 claims)	Body stressing	31.9
	Being hit by moving objects	29.1
	Hitting objects with a part of the body	23.7
Pulp, paper and converted paper product manufacturing (540 claims)	Body stressing	43.7
	Being hit by moving objects	19.4
	Falls, trips and slips of a person	17.0
Printing (including the reproduction of recorded media) (617 claims)	Body stressing	42.7

Note: The sub-industry totals do not add to the industry totals due to Labour Hire claims which aren't allocated a sub-industry.

e. Agency of injury (non-fatal claims)

Table 11 shows that the most common agencies of injury in the Manufacturing industry over the five years to 2019–20 were:

- materials and substances (29 per cent)
- non-powered hand tools, appliances and equipment (27 per cent)
- machinery and (mainly) fixed plant (12 per cent)
- environmental agencies (9 per cent)
- mobile plant and transport (7 per cent).

These five agencies accounted for most (84 per cent) industry claims.

Table 11: Manufacturing, most prevalent agencies of injury for accepted non-fatal workers compensation claims by subdivision, 2015–16 to 2019–20

Industry subdivision	Agency of injury	Percentage of claims within subdivision (%)
Food product manufacturing (12,874 claims)	Machinery and (mainly) fixed plant	11.1
	Environmental agencies	10.5
	Materials and substances	10.2
	Non-powered hand tools, appliances and equipment	36.8

f. Fatalities

Table 12 details a breakdown of the accepted number of fatal workers' compensation claims in Queensland by major industry groups, as administered under the Workers' Compensation and Rehabilitation Act 2003.

The Manufacturing industry (as well as transport, postal and warehousing) recorded the second highest number of compensated fatalities for Queensland industries over the period 2015–16 to 2019–20.

There were eight fatalities recorded on average for manufacturing each year compared to 59 for all Queensland industries.

Table 12: Accepted fatal workers compensation claims

Industry	2015–16	2016–17	2017–18	2018–19	2019–20	Average
Agriculture, forestry and fishing	6	6	11	6	2	6
Mining	1	6	3	7	3	4

4. Inspectorate activity

a. Events notified

Manufacturing accounts for a relatively small number of notified events in Queensland each year, and in 2019–20 accounted for 10 per cent (or 713 incidents) of all incidents in Queensland.

In 2019–20, events in the bodily harm/dangerous event category accounted for 62 per cent of all notified incidents that occurred in the Manufacturing industry.

Table 13: Manufacturing, events notified

Incident type	Number of events notified				
	2015–16	2016-17	2017-18	2018-19	2019–20

Source: CISR, extracted July 2020 Notes: # admitted to hospital. ## all other incidents including dangerous events.

The number of notified fatality events presented in Table 13 are the number of work-related fatalities recorded and coded as such under the *Work Health and Safety Act 2011* (WHS Act). It is the official record of notifications to the workplace health and safety regulator of workers (both employees and self-employed) who suffered a fatal injury at work as well as bystanders who suffered a fatal injury as a consequence of work activity.

b. Inspectorate activity

Table 14 shows that manufacturing accounted for around 10 per cent of inspectorate activity each year. Around 18 per cent of activities were of a proactive/educative nature in 2019–20.

It is important to note that activities in different categories and within categories are not necessarily equal in terms of time or resources used.

Table 14: Manufacturing, inspectorate activities

Type of activity	Number of inspector activities				
	2015–16	2016-17	2017-18	2018-19	2019–20
Number of workplace visits: reactive	741	970	1247	1570	1615
Other intervention activities: reactive	2,898	3,737	4,116	5,789	6,172
Number of workplace visits: proactive	1,331	1,142	1,115	1,710	1,475

c. Statutory notices

Over recent years, WHSQ inspectors have issued more statutory notices in response to the findings of the Best Practice Review (BPR). The BPR recommended a shift to directed compliance, noting that stricter compliance by duty holders would reduce the exposure to risk of injury and illness to workers and others thereby reducing injury rates and workplace illnesses.

Table 15 details the different types of compliance notices issued by inspectors under the WHS Act or the *Electrical Safety Act 2002* (ES Act).

In 2019–20, improvement notices were the most commonly issued type of notice to businesses in the Manufacturing industry (88 per cent). Overall, in 2019–20, 13 per cent of notices issued by inspectors in Queensland were issued to businesses in the Manufacturing industry.

Table 15: Manufacturing, statutory notices

5. Explanatory notes

Accepted claims

Accepted claims are those where an insurer has accepted liability for the claim at some stage of the claims history. Accepted claims may be subject to development over time, thus the category they are reported in may change over time. Claims for a serious injury are those involving one or more weeks off work.

Accepted claims include the categories:

- accepted non-fatal injury claims (including the category 'accepted non-fatal serious injury claims')
- accepted non-fatal disease and other claims
- accepted fatal workers' compensation claims.

Claim rate

Due to limitations in data availability, calculating claim rates for occupations is not possible except at Census time.

The claim rates for the type of claim by industry reported in Tables 5, 6, 7 and 8 are based on the number of employed people from ABS labour force data. This is used as an approximation of employees covered by Workers' Compensation and is likely an overestimate of less than ten per cent. In between Census periods, ABS labour force data is the best information available for this purpose. The claim rate is derived using the following formula:

$$\frac{\text{Number of claims (by industry)} \times 1,000}{\text{Number of employed (by industry)}} = \text{Claim rate per 1,000 employees covered by Workers' Compensation}$$

Events

- The WHS Act prescribes that a person who conducts a business or undertaking must ensure that the regulator is notified immediately after becoming aware that a notifiable incident arising out of the conduct of the business or undertaking has occurred. What is considered to be notifiable is also defined in this legislation.
- The Office of Industrial Relations (OIR) also receives requests for regulator response.
- Notifications and reports to OIR are assessed as per the WHSQ Response Assessment Process based on a number of factors including, but not limited to, the severity of the incident. This forms the basis for the action taken by OIR in response to the notification or report and can include administrative response, regional response, Electrical Safety Office (ESO) response or response by one of the specialist units in OIR.
- As part of this process, incidents are categorised as types as per the categories prescribed in the legislation based on the information Assessment Services is provided and/or gathers as part of their assessment process.

Full-time workers

Full-time workers are people who usually work 35 hours or more per week in all jobs, or although usually working less than 35 hours a week, actually worked 35 hours or more during the reference week.

Part-time workers

Part-time workers are those who usually work less than 35 hours per week, and either did so during the reference week, or were not at work in the reference week.

Notices

- Statutory notices represent notices issued as a result of both proactive and reactive work.
- Data in this report may differ from other data published on statutory notices due to the date of extraction from the database.
- Due to various legislative changes occurring over the period 2015–16 to 2019–20, caution should be exercised when comparing changes in data items over this period. The various data items, relevant legislation changes and some of the impacts are explained below:
 - ‘Infringement notices’ are on-the-spot fines for contravention of either WHS legislation or the ES Act. From 1 January 2012, this data includes infringement notices where a dangerous and/or hazardous substance is involved.
 - ‘Seizures’ includes a number of notice types, all relating to when something (e.g. plant, tool or workplace) is seized for evidence, or where a workplace which is the subject of investigation is not to be disturbed. Seizure notices are issued under either the WHS Act, ES Act or, until 1 January 2012, the *Dangerous Goods Safety Management Act 2001*.
 - ‘Electrical safety protection notices’ and ‘unsafe equipment notices’ are issued by WHSQ inspectors under the ES Act. The ‘electrical safety protection notice’ is the equivalent of the ‘WHSQ prohibition notice’ and the ‘unsafe equipment notice’ is also the equivalent of the ‘prohibition notice’ but where it relates specifically to equipment, as opposed to work processes.
 - ‘Improvement notices’ require an improvement in health and safety by a specified time and can be served under either the WHS Act or ES Act.
 - ‘Prohibition notices’ prohibit a certain work activity or use of certain equipment and can be served under WHS legislation only.

Site visits

Site visits represent the number of times a workplace was visited by WHSQ staff. One or more site visits may take place as part of any given investigation, assessment or advisory. Advisories are an educational or industry information activity undertaken by an inspector.

Workers covered

Covered workers have been approximated using the ABS number of employed people. See Claim rate section above for further information.
